

CPTN206

Chapter 17

LAB 14

Create a bank account class and two sub classes. One sub class is a checking account and the other sub class is a savings account.

Bank Account class

- public number
- private name
- private address

Checking account sub class

- member variable
- private balance

methods:

- checking account deposit
- checking account withdrawal
- display checking account balance

Savings account sub class

- member variable
- private balance

methods:

- savings account deposit
- savings account withdrawal
- savings checking account balance

This problem may be solved using 1 form with 6 buttons. Set the button's value to the action, for example "Checking Deposit"

Note hidden fields or session variables may be used to store the object data.
